PROJECT TITLE

Adaptive AI Research Intelligence Platform for Automated Literature Review and Research Gap Discovery

ABSTRACT

The rapid growth of scientific publications makes literature review and research gap identification difficult for researchers. The proposed **Adaptive AI Research Intelligence Platform for Automated Literature Review and Research Gap Discovery** uses Artificial Intelligence, Natural Language Processing, and Large Language Models to analyse research papers, generate summaries, identify trends, and discover research gaps. Existing systems mainly provide search and summarization features but lack adaptive and personalized research assistance. The platform is developed using React.js, Spring Boot, PostgreSQL, LangChain, ChromaDB, Docker, and Kubernetes. The expected outcome is faster literature review, improved research productivity, and intelligent support for data-driven research decisions.
